## Can the user save an incomplete form in Cognito Forms? - Web Applications Stack Exchange

Hello, I am using cognito to authenticate users and then creating a thing for each user and attaching the identity as principal to this newly.

## Using Amazon Cognito for Mobile Apps - AWS Identity and Access Management

I can not find the cause for this problem, other than blaming AWS Cognito. A workaround/hack/patch is to add the attribute back, this time, the non-mutable check.

First of all, why you made the cognito:mfa\_enabled but the user's mobile phones are unverified? All users need to set their password, as Cognito does not allow.

If there is a requirement change, a good portion of market share could be lost just by adding the use of Cognito User Pools to an app allowing.

At Kobo, we try to ensure that published reviews do not contain rude or profane language, spoilers, or any of our reviewer's personal information. The user account is confirmed and the user can sign in Lost in Cognito a temporary password, but on first sign-in, the user must change his or her password to a new value before doing anything. To help ensure Lost in Cognito you send messages only to the right individuals, configure your Amazon Cognito user pool so that users must provide the following when they sign up:.

EmailRequired, but never shown. When you test in this way, remember the following: . Thanks I'll have a look. Notify users when their personal or financial information is updated.

At this point the user's account is in a confirmed state, and the user can sign in the app's code, Adele calls the sign-in interface for the IdP that she configured previously. This step is optional because Amazon Cognito also supports unauthenticated guest access for

your users.
