Self-assembled vesicles are essential components of primitive cells. However, the evidence is not quite so clear. Retrieved 20 September

The accumulation and concentration of organic molecules on a planetary surface. All change is explained by the arrangement and rearrangement of these four elements. The matter in the asteroid belt, for example, appears to have been unable to accrete into a planet due to orbital resonances with Jupiter; if the giant had appeared in the region that is now between the orbits of Venus and Mars Earth would almost certainly not have developed in its present form.

The Utility of Biodiversity from an Evolutionary Perspective. A Borderline naturally arising, three-dimensional compartmentation observed within fossilized seepage-site metal sulphide precipitates indicates that these inorganic compartments were the

precursors of cell walls and membranes found in free-living prokaryotes.
