Journal of Clinical Epidemiology. Kielhofner, A model of human occupation:

In part B of the TMT, improvements in divided attention were statistically significant. Furthermore, the use of a Bonferroni adjustment to reduce the chance of Type 1 error made the significance level more conservative. There was also a clinically significant improvement for processing speed in part A of the TMT. Findings from cognitive outcome measures are shown in Table 5. Background Multiple Sclerosis MS is a demyelinating disease of the central nervous system in the early stage of multiple sclerosis.
